

Dr. Mary Szafraniec currently works as a water resource technical director at Wood Environment and Infrastructure Solutions, Inc. (Wood, previously known as Amec Foster Wheeler) in Tampa, Florida. She has an extensive ecological and water quality assessment and restoration background, which she acquired from her studies and independent research at USF (Bachelors of Biology), UF (Master and Doctor of Philosophy of Environmental Engineering Science) and at her previous jobs while at the Department of Environmental Protection and the Southwest Florida Water Management District working on water quality restoration projects for the last 15 years. She has recently been focusing her research to advance concepts in sediment biogeochemistry and groundwater connectivity with the goal of optimizing stream, wetland and lake restoration project performance.
