

A WATERSHED-WIDE TREATMENT ALTERNATIVE TO RESTORE HABS IMPAIRED LAKES

ESSRE RePleNish treatment solution for dissolved Phosphorus (P) reduction, which is readily integrated with stormwater or agriculture Best Management Practices, including shoreline erosion/protection, and is applicable to all surface water sources and pathways of nutrient pollutant P within a watershed. ESSRE RePleNish can be safely applied to Phosphorus impaired lakes or streams without the need for chemicals and can be applied in-situ or ex-situ.
